Dear EIT Health Recruitment Team,

I am applying for your Freelance Instructional Designer & eLearning Developer opportunity. Your EP PerMed and BrightSkills programmes combine topics that matter to me: rigorous healthcare and life-science content, clear learning outcomes, and high-quality digital teaching materials.

I hold a Ph.D. in Biomolecular Chemistry and Bioinformatics from Masaryk University. In 2026, I teach anatomy and physiology, microbiology and epidemiology, and biochemistry to healthcare students at EUROPEAN COLLEGE in Brno. Earlier, I taught eleven university-level modules. For my current classes, I develop original, structured lecture decks, study notes, exercises and assessment questions rather than only delivering an existing script.

My strongest contribution to your programmes would be the biomedical subject-matter and instructional-design workstream: decomposing expert content into learning objectives and lesson sequences, designing checks for understanding, creating clean narratives and reviewable resources, and applying rigorous source-based quality assurance. I am comfortable reviewing complex scientific text and visual content with stakeholders in English.

I should be transparent about the technical requirements: I have experience with PowerPoint, Google Workspace, MS Teams, scientific visualisation and Python, but I would not describe myself as an independently proven Moodle or Articulate Rise / Storyline production specialist. I could support content architecture, assessment, SME coordination and QA alongside your LMS implementation specialists, and discuss a ramp-up plan if appropriate.

I would welcome a fixed-scope paid pilot, for example one fully specified biomedical learning unit with outcomes, storyboard, explanatory assets, knowledge checks and an acceptance review. I am EU-based and available for remote, part-time freelance work subject to scheduling. My proposed expert rate is EUR 160 per hour excluding any applicable taxes, or an agreed fixed price depending on deliverables and rights.

Thank you for considering my application. I would be glad to discuss whether the content-focused part of your brief matches an immediate need.

Kind regards,
Aliaksei Chareshneu, Ph.D.
